PROFESSIONAL SUMMARY

Java Backend Developer focused on Spring Boot. Hands-on experience building and shipping complete applications — from secure RESTful APIs (JWT) and cloud storage integrations to event-driven data pipelines with Kafka, web dashboards and mobile apps. I also took a real-time WebRTC product from code to production on a Linux VPS (Docker, Nginx, TLS, Cloudflare). In my current role, I automate processes with Python/Pandas, built management systems with Spring and React, and handle IBM DB2 databases.

TECHNICAL SKILLS

Backend: Java 17/21, Spring Boot 4 (JPA, Security, MVC, WebSocket/STOMP), RESTful APIs, JWT, Apache Kafka, Python, Pandas
Testing: JUnit, Mockito, Testcontainers
Frontend: JavaScript, TypeScript, React, React Native, Next.js, WebRTC
DevOps & Tools: Git/GitHub, Docker & Docker Compose, Maven, Flyway, Nginx, Let's Encrypt, Linux (Debian VPS)
Cloud & Databases: Microsoft Azure, AWS Cloud, Cloudflare R2, Firebase Cloud, PostgreSQL, MySQL, MongoDB, IBM DB2

PROFESSIONAL EXPERIENCE

Systems Analyst — Transnil Transportes
Sep 2025 – Present
Rio Negrinho, SC — Brazil

- Built a Python/Pandas automation integrated with the Wix API that increased pending-freight entry speed by 80% and sharply reduced human error.
- Built an automated tachograph file upload flow using Spring Boot, Cloudflare R2 and React.
- Supported SQL database management, including backup, restore and query optimization routines.
- Solved complex software and connectivity issues, building troubleshooting and logic skills that transfer directly to debugging and development.
- Proactively adopted new technologies, focusing on service migration and integration.

PROJECTS

PassaPraCa — Real-Time P2P File Transfer · live

- **Product & architecture:** ephemeral file/text sharing with no account — files go browser-to-browser over end-to-end-encrypted WebRTC and are never stored on the server. Spring Boot 4 / Java 21 API with STOMP/WebSocket signaling, PostgreSQL + Flyway and a Next.js 16 / React 19 / TypeScript client.
- **Large files & security:** 16 KB chunks with backpressure and ack-based flow control, written to browser disk (OPFS) and resumable from the last byte; owner approval or password entry, PBKDF2, hashed peer IDs, per-IP rate limits (IPv6 /64) plus Nginx limits.
- **Performance bottleneck solved:** relayed transfers were capped at ~2–3 Mbit/s by the VPS uplink; moved the relay to Cloudflare Realtime TURN, keeping the self-hosted coturn (HMAC credentials) as automatic fallback.
- **Cloud cost control:** denial-of-wallet protection — monthly relay budget read from Cloudflare GraphQL analytics (fail-closed to coturn) and per-folder/per-IP daily quotas that revoke credentials.
- **Deploy & quality:** Debian VPS with Docker Compose (Nginx, API, Next.js, PostgreSQL, coturn, Certbot), multi-stage builds, Let's Encrypt TLS with auto-renewal; 100+ tests (JUnit, Mockito, Testcontainers) and Marco Civil access logs.
  Stack: Java 21, Spring Boot 4, Spring Security, WebSocket/STOMP, JPA, PostgreSQL, Flyway, Next.js, React, TypeScript, WebRTC, Docker Compose, Nginx, Let's Encrypt, coturn, Cloudflare TURN, Debian, JUnit, Testcontainers

SpringBank API · code

- Banking REST API in Spring Boot: JWT auth, multiple accounts per user, PIN-guarded deposits, withdrawals and transfers.
- Pessimistic row locks (SELECT ... FOR UPDATE) with ordered locking — no stale balances, no deadlocks; PINs hashed with HMAC-SHA256 + pepper before BCrypt; RFC 7807 errors, Flyway and 126 tests (JUnit/Mockito).
  Stack: Java 17, Spring Boot 4, Spring Security, JWT, PostgreSQL, Flyway, JUnit, Mockito, Docker, Maven

Real-Time GPS Tracking Platform (Uber-like) · code

- Event-driven location pipeline: a REST endpoint publishes device pings to Kafka, and a batch Kafka listener coalesces them per device and bulk-writes to MongoDB every 5s — turning N database round trips into one.
- At-least-once delivery: offsets are acknowledged manually only after the data is persisted.
- Geospatial /nearby search on a 2dsphere index, with a compound index serving paginated device history.
  Stack: Java 17, Spring Boot 4, Apache Kafka, MongoDB, Spring Web MVC, Docker Compose, Maven

Ambiente JMuller · *company project (private)*

- React Native (Expo) app + React/Next.js dashboard with Java Spring Boot APIs for teachers: class scheduling, student check-in and contract management; DevOps with Docker, Nginx and Azure, PostgreSQL and JWT auth.
  Stack: Java, Spring Boot, React Native, Next.js, Docker, Azure, PostgreSQL

EDUCATION & CERTIFICATIONS

Pontifícia Universidade Católica do Paraná (PUCPR)
Curitiba, Brazil
Associate Degree in Systems Analysis & Development
Jan 2025 – Jul 2027
Relevant coursework: data structures, algorithms, programming logic, databases and functional program design.

AWS Certified Cloud Practitioner · credential — Oct 2026
AWS Certified AI Practitioner · credential — Sep 2026

LANGUAGES

Portuguese — Native **English** — Advanced (professional working proficiency; meetings & interviews)
